

Ecogrow

Ecogrow is an innovative carrier mat for the cultivation of sedum mats. Ecogrow is 100% biodegradable and compostable and is 100% made of renewable resources. As raw material, the biopolymer PLA, made out of plant material, is used.

The European Commission has selected our innovative nonwovens for a Life+ project. You can find more information and pictures of recent projects on our dedicated Life+ website www.renew4gpp.com.

Ecogrow is available in two qualities: Ecogrow 167 and Ecogrow 250.

	Ecogrow 167	Ecogrow 250
Type	One layer	Two layers, upper layer with tridimensional structure
Composition	100% PLA	100% PLA
Weight (g/m ²)	167	250
Colour	Light brown	Brown

Test Ecogrow 167

October 2012

Installation of the matting, covering with substrate and seeding

April 2013

First evaluation of the product. Winter 2012-2013 was longer en colder than average. Sedum plants could only develop in the autumn months. In spite of the weather conditions, roots of the sedums plants started to develop and penetrate the matting.

August 2013

Conclusions will be drawn in the summer of 2013.
